

Senior Software Engineer

Digital Results Group has an immediate opportunity for a Senior Software Engineer to support the on-going design, development and implementation of a state-of-the-art surveillance & intelligence platform for the Department of Defense.

Specifically, this opportunity involves a program that provides military and intelligence users' access to live/archived video, sensor and battlefield data in a geospatial context. This platform is currently deployed - significantly reducing the risk to our troops and saving lives overseas by delivering critical situational awareness and valuable forensic tools.

To qualify you must be a U.S. citizen.

While not required upon hiring, a security clearance may be extended to you based upon need and qualification.

You will be a key contributor to the ongoing development of a large scale system on the latest hardware and software available. You will work within a wide range of application disciplines such as stream processing, process management, process control and systems level interface design and definition. For the right person this will be a unique opportunity to contribute to a globe spanning software system running on the largest private network in the world.

Candidates should have the following skills:

- A minimum of 6 to 8 years of experience
- Excellent written and oral communication skills
- Demonstrated experience contributing to the development and maintenance of distributed systems
- Demonstrated experience troubleshooting complex software in a variety of environments
- Demonstrated experience delivering software in an environment with limited requirements
- At least 5 years of experience with .NET and C#
- Some exposure to the use of COM within the CLR
- At least 5 years of experience with a major RDBMS platform
- A solid knowledge of OOP techniques
- Experience with ORM mapping concepts
- Experience with Web Services and related technologies
- A degree in Computer Science, Engineering or equivalent technical experiences

Background or skills in the following areas a significant plus...

- Education in physics, mathematics and/or statistics
- Familiarity with GIS and related technologies
- Familiarity with aviation and aerospace concepts
- Experience with shrink wrapped software development
- Experience with multimedia technologies
